

BUILDING &
ENGINEERING
CONSTRUCTION

We are celebrating 20 years of building and construction activity in Melbourne where we've completed projects for many of Australia's most productive, profitable, conservative and forward-thinking companies and organisations.

A recent project was a large canopy extension to an existing building at the Chisholm Berwick Technical Education Centre (TEC).

This facility was one of the first four TEC's commissioned by the State Government. Designed by award-winning architects Vincent • Chrisp & Partners Pty Ltd, the Berwick TEC is a different kind of educational facility specifically designed to suit the education and training needs of young adults.

We have developed an enviable reputation for excellence on a broad range of building projects. With buildings for Vinidex and Blue Circle Southern Cement, we have handled in-house all aspects of the detail design and construction.

In other instances we have been pleased to work in association with leading industry professionals on specific projects:

- Western Water pumping stations, built in conjunction with MWH, a leading global environmental engineering firm that provides technically innovative, sustainable solutions to effectively manage resources.

- Loading bay and canopy for PZ Cussons, Dandenong, in collaboration with Brown Consulting Pty Ltd (now Brown and Tomkinson Pty Ltd), international engineers and planners.

- Structures for BOC Australia's Preston facility, built in association with Synertec a company that operates throughout South-East Asia and Australia and thrives on the challenge of operating within complex, high risk and highly regulated markets.

- Landscaping of Williamstown High School Bayview Campus in conjunction with award-winning landscape architects and urban designers rush \ wright. The campus, designed by Spowers, has become a model school for environmental education, both in it's built form and in the curriculum offered to students.

We are committed to creating and maintaining long-term relationships with industry professionals and our customers.

Once a project is in-house we afford our staff a great degree of freedom and encourage informal communication between colleagues and customers – ensuring the right people will be involved in guiding a project through all stages to completion.

Quality Assurance and Safety Management Systems are developed, implemented and carefully maintained for us by Ken Chong Engineering Pty Ltd who have extensive experience in this vital aspect of design and construction.

For 18 years BFC has achieved a zero 'lost time due to injury' record in the high-risk construction industry in which we perform much of our work. We make health and safety an integral part of our work and have a proven commitment to safe work practices, safety training, supervision and a safe work environment.

Further information on the scope of our projects can be found on our website
